SUMMARY

Frontend engineer with 4 years of commercial experience building React, Next.js, TypeScript and React Native products. I write typed, tested code for flows where correctness matters: invoices, payments and double-entry accounting reports, OTP-verified e-signatures, role-based access with MFA and TanStack Query data layers. Recently I built most of a healthcare-operations platform's frontend, with role-based access and a full test suite, and a rental marketplace's checkout, wallet and payments. I learn a codebase quickly and work closely with design and backend teams.

SKILLS

Core	TypeScript, JavaScript, React 19, Next.js (App Router), React Native (Expo), HTML, CSS
Finance domain	Invoicing, payments and wallets, double-entry accounting reports, receivables / payables, contracts with OTP e-signatures
Data & state	TanStack Query (React Query), Zustand, Redux Toolkit, React Hook Form, Zod, OpenAPI-generated types, REST, Supabase, Firebase
Testing & quality	Vitest, React Testing Library, Jest, Playwright, Storybook (a11y), code review
Security & access	Cookie sessions with CSRF protection, role- and capability-based routing, MFA, OTP, route guards
UI & process	Tailwind CSS, shadcn/ui, Radix UI, MUI, Arabic / English (RTL) · Git, Jira, Figma, Agile / Scrum, AI-assisted development

EXPERIENCE

nWeave — Software Engineer (Frontend) 10/2025 – Present

Alexandria, Egypt · Healthcare and B2B SaaS products, mobile apps

Smart FAQ System — knowledge platform for a healthcare operations client · main frontend engineer

- Built the frontend from project setup to **delivery in three weeks** as the main author — role-based access with MFA, an editorial review workflow and a full unit and component test suite — using React 19, TypeScript and TanStack Query.
- Secured the app with a cookie session, antiforgery tokens on every write, capability-based routing and **MFA for admins**, and ETag checks so two admins can't overwrite each other.
- Cut admin-table re-render time from **~20 ms to ~2 ms** by rendering one layout per screen size, memoizing row menus and badges, and mounting menus on first open.
- Typed the full API contract from OpenAPI against an ASP.NET Core backend, and built an Atomic-Design component system documented in Storybook with accessibility checks.

AHS Medical Exchange — healthcare B2B platform · billing

- Built a **billing-formula builder** that lets admins write pricing rules safely — a mathjs parser with an allowlist (no functions, no eval), live validation, divide-by-zero checks and a test panel.
- Built a **TanStack Query layer** to replace a custom Axios hook across orders, invitations, messaging, staff and billing, and wrote a guide for the team; the shared client and pattern are used for new features.
- Worked in a large multi-team codebase through Jira-ticketed branches and code review, and helped two teammates through pairing.

ONE14 QARDIO — Qur'an & running app, live on Google Play & App Store

- Planned the features, UX and technical approach for a React Native (Expo) and Firebase app, worked with a teammate who built them through an AI-assisted workflow, and tested each release on iOS and Android.
- Found why GPS distance was under-counted by **17%** (a 30 km run recorded as ~25 km) and pushed the fix: 1 Hz high-accuracy tracking with a tuned software filter, tested against Strava and Apple Watch.

Bites — Frontend Developer · Part-time 09/2025 – 04/2026

Remote · Cairo-based business platform (finance, sales CRM, contracts) in Next.js 14

- **Shipped invoicing, accounting and e-signature modules to production** over 7 months part-time in a 14-person team (Next.js 14, TanStack Query, React Hook Form, Zod, MUI).
- Built the invoice builder (line items with live totals, payments, attachments, email tracking), plus bills, expenses, debit notes, receivables / payables and **double-entry journal reports**.
- Added **OTP-verified e-signatures** to contracts and invoices and built the contract-creation workflow; co-built a cinema booking module with seat selection, food ordering and checkout.

Profound Agency — Frontend Developer 07/2024 – 09/2025

Alexandria, Egypt · Client products on .NET backends

okoRent — peer-to-peer rental marketplace · sole frontend developer

- Built a rental marketplace's **entire frontend as the only frontend developer** — guest, user, business and admin portals — with Next.js 14, TypeScript and TanStack Query.
- Built booking, checkout and payments: date-range availability, a booking calendar, payment links, a wallet and invoices.
- Added **real-time chat and notifications with SignalR**, with an infinite-scroll, virtualized inbox.
- Structured the data layer as TanStack Query modules with URL-synced filters, shared loading and error states, and role-based route protection in Next.js middleware.

Spectra — healthcare services platform · admin and doctor portals

- Built the **admin and doctor portals** of a healthcare platform in Next.js 14: appointments, prescriptions, medical reports, contracts, staff, master data and user permissions.

Freelance — Frontend Developer 02/2024 – 05/2025

Remote · alongside full-time roles · four clients

- Built bilingual (Arabic / English) Next.js 14 + TypeScript websites for four clients, including a Saudi trip-sharing app's site and a homework-help platform with Google sign-in and a user dashboard.

Aquadic — Frontend Developer 10/2022 – 07/2024

Alexandria, Egypt · Client websites and web apps

- Built **9 client websites and web apps** as the main frontend developer on each, from responsive HTML / CSS / JavaScript sites to Next.js 13 apps.
- Built a bilingual (Arabic / English, RTL) e-learning platform and a services marketplace with Firebase chat, SMS OTP sign-in and checkout in Next.js 13.

EDUCATION

B.Sc. Computer Science — Faculty of Science, Minia University 10/2018 – 06/2022
