## SUMMARY

Frontend engineer with 4 years of commercial experience building React, Next.js, TypeScript and React Native products. I write typed, tested code for flows where correctness matters: invoices, payments and double-entry accounting reports, OTP-verified e-signatures, role-based access with MFA and TanStack Query data layers. Recently I built most of a healthcare-operations platform's frontend (27 screens, 551 automated tests) and a rental marketplace's checkout, wallet and payments. I learn a codebase quickly and work closely with design and backend teams.

## SKILLS

| | |
|---|---|
| **Core** | TypeScript, JavaScript, React 19, Next.js (App Router), React Native (Expo), HTML, CSS |
| **Finance domain** | Invoicing, payments and wallets, double-entry accounting reports, receivables / payables, contracts with OTP e-signatures |
| **Data & state** | TanStack Query (React Query), Zustand, Redux Toolkit, React Hook Form, Zod, OpenAPI-generated types, REST, Supabase, Firebase |
| **Testing & quality** | Vitest, React Testing Library, Jest, Playwright, Storybook (a11y), code review |
| **Security & access** | Cookie sessions with CSRF protection, role- and capability-based routing, MFA, OTP, route guards |
| **UI & process** | Tailwind CSS, shadcn/ui, Radix UI, MUI, Arabic / English (RTL) · Git, Jira, Figma, Agile / Scrum, AI-assisted development |

## EXPERIENCE

**nWeave** — Software Engineer (Frontend) 10/2025 – Present

Alexandria, Egypt · Healthcare and B2B SaaS products, mobile apps

**Smart FAQ System** — knowledge platform for a healthcare operations client · main frontend engineer

- Built the frontend in three weeks — **27 screens, 3 roles with MFA and 551 automated tests** — as the main author (166 of 173 commits), using React 19, TypeScript and TanStack Query.
- Secured the app with a cookie session, antiforgery tokens on every write, capability-based routing and **MFA for admins**, and ETag checks so two admins can't overwrite each other.
- Cut admin-table re-render time from **~20 ms to ~2 ms** by rendering one layout per screen size, memoizing row menus and badges, and mounting menus on first open.
- Typed the full API contract (**94 endpoints**) from OpenAPI against an ASP.NET Core backend, and built an Atomic-Design component system with 75 Storybook stories and accessibility checks.

**AHS Medical Exchange** — healthcare B2B platform · billing

- Built a **billing-formula builder** that lets admins write pricing rules safely — a mathjs parser with an allowlist (no functions, no eval), live validation, divide-by-zero checks and a test panel.
- Built a **25-module TanStack Query layer** to replace a custom Axios hook across orders, invitations, messaging, staff and billing, and wrote a guide for the team; the shared client and pattern are used for new features.
- Worked in a 3.9k-commit, multi-team codebase through Jira-ticketed branches and code review, and helped two teammates through pairing.

**ONE14 QARDIO** — Qur'an & running app, live on Google Play & App Store

- Planned the features, UX and technical approach for a React Native (Expo) and Firebase app, worked with a teammate who built them through an AI-assisted workflow, and tested each release on iOS and Android.
- Found why GPS distance was under-counted by **17%** (a 30 km run recorded as ~25 km) and pushed the fix: 1 Hz high-accuracy tracking with a tuned software filter, tested against Strava and Apple Watch.

**Bites** — Frontend Developer · Part-time 09/2025 – 04/2026

Remote · Cairo-based business platform (finance, sales CRM, contracts) in Next.js 14

- Shipped **190 commits to production in 7 months part-time** — second-most in a 14-person team — across invoicing, accounting and e-signature modules (Next.js 14, TanStack Query, React Hook Form, Zod, MUI).
- Built the invoice builder (line items with live totals, payments, attachments, email tracking), plus bills, expenses, debit notes, receivables / payables and **double-entry journal reports**.
- Added **OTP-verified e-signatures** to contracts and invoices and built the contract-creation workflow; co-built a cinema booking module with seat selection, food ordering and checkout.

**Profound Agency** — Frontend Developer 07/2024 – 09/2025

Alexandria, Egypt · Client products on .NET backends

**okoRent** — peer-to-peer rental marketplace · sole frontend developer

- Built a rental marketplace's **entire frontend alone — 110 pages** across guest, user, business and admin portals (336 of 364 commits) — with Next.js 14, TypeScript and TanStack Query.
- Built booking, checkout and payments: date-range availability, a booking calendar, payment links, a wallet and invoices.
- Added **real-time chat and notifications with SignalR**, with an infinite-scroll, virtualized inbox.
- Structured the data layer as 31 TanStack Query modules with URL-synced filters, shared loading and error states, and role-based route protection in Next.js middleware.

**Spectra** — healthcare services platform · admin and doctor portals

- Built the **admin and doctor portals** of a healthcare platform (about 120 pages) in Next.js 14: appointments, prescriptions, medical reports, contracts, staff, master data and user permissions, with all 242 commits shipped to production.

**Freelance** — Frontend Developer 02/2024 – 05/2025

Remote · alongside full-time roles · four clients

- Built bilingual (Arabic / English) Next.js 14 + TypeScript websites for four clients, including a Saudi trip-sharing app's site and a homework-help platform with Google sign-in and a user dashboard.

**Aquadic** — Frontend Developer 10/2022 – 07/2024

Alexandria, Egypt · Client websites and web apps

- Built **9 client websites and web apps** as the main frontend developer on each (~530 commits), from responsive HTML / CSS / JavaScript sites to Next.js 13 apps.
- Built a bilingual (Arabic / English, RTL) e-learning platform and a services marketplace with Firebase chat, SMS OTP sign-in and checkout in Next.js 13.

## EDUCATION

**B.Sc. Computer Science** — Faculty of Science, Minia University 10/2018 – 06/2022
