SUMMARY

Frontend engineer with 4 years of commercial experience building React, TypeScript and React Native products. I build frontends where correctness matters: role-based access with MFA, typed API contracts, data layers built on TanStack Query, and test suites that catch regressions before users do. Recently I led the frontend of a healthcare-operations platform from the first commit to 27 screens and 551 automated tests, and built a formula engine for healthcare billing. I've mentored two teammates and I'm comfortable owning a product area end to end.

SKILLS

Core	TypeScript, JavaScript, React 19, Next.js, React Native (Expo), HTML, CSS
Data & state	TanStack Query, Zustand, React Hook Form, Zod, OpenAPI-generated types, REST, Supabase, Firebase
Testing & quality	Vitest, React Testing Library, Jest, Playwright, Storybook (a11y), oxlint, code review
Security & access	Role- and capability-based routing, MFA flows, session expiry handling, route guards, biometric sign-in
UI	Tailwind CSS, shadcn/ui, Radix UI, PrimeReact, Atomic Design, Arabic/English (RTL) with i18next
Process	Git, Bitbucket, Jira, Figma, Agile/Scrum, AI-assisted development

EXPERIENCE

nWeave — Software Engineer (Frontend) 10/2025 – Present

Alexandria, Egypt · Healthcare and B2B SaaS products, mobile apps

Smart FAQ System — knowledge platform for a healthcare operations client · lead frontend

- Built the frontend from the first commit (React 19, TypeScript, TanStack Query, Tailwind, shadcn/ui): 27 Figma screens for desktop and mobile, shipped in about three weeks as the main author (166 of 173 commits).
- Implemented three user roles with capability-based routing and navigation, invitation activation, session-expiry handling and **MFA for administrators**.
- Typed the full API contract (**94 endpoints**) from OpenAPI and built the data layer with a typed error catalogue against an ASP.NET Core backend, then removed every mock once the API was live.
- Wrote **551 unit and component tests** (Vitest, Testing Library) covering the request layer, query client, sign-in journeys and the review workflow, plus 75 Storybook stories with accessibility checks.
- Built an approval workflow (draft → submit → return or publish), version comparison and a filterable audit log, so every published answer is reviewed and traceable.
- Fixed list performance by rendering one table layout and stopping per-row menu and badge re-renders.

AHS Medical Exchange — healthcare B2B platform · large multi-team codebase

- Built a **formula builder and evaluation engine for billing**: drag-and-drop editor, custom parser and evaluator on mathjs, live validation and a test panel to try formulas before saving. It shipped, and later payment features build on it.
- Designed a TanStack Query layer of **25 domain modules** to replace a custom Axios hook and migrated core flows (orders, invitations, messaging, staff, billing) in stages, removing duplicated request and loading logic.
- Wrote the team's React Query implementation guide and **mentored two teammates** through code reviews and pairing.

Mobile & other products

- Trackoo (React Native): built the Quran audio player with lock-screen controls, the stories viewer and the feed's TanStack Query data layer; co-built background GPS tracking with a teammate.
- Boost-KGoal (health workouts dashboard): built the pulse-pattern editor and secured the admin area with route guards and tests.

Profound Agency — Frontend Developer 07/2024 – 09/2025

Alexandria, Egypt · Client web applications in Next.js

- Built Kyasco, a B2B wholesale platform in Next.js: customer storefront, admin dashboard, inventory and invoices, with full Arabic/English RTL support.
- Built okoRent, a peer-to-peer rental marketplace: storefront and admin panel with live chat, notifications and user roles.

Aquadic — Frontend Developer 10/2022 – 07/2024

Alexandria, Egypt · Client websites

- Built responsive React and Next.js websites for e-commerce and corporate clients from Figma designs.
- Built a shared Axios layer with interceptors for auth tokens, unified error handling and retries.

PROJECTS

ONE14 QARDIO — React Native, Expo, Firebase Google Play & App Store

- Qur'an-and-running app: background GPS tracking, lock-screen audio synced to each ayah, Strava sync, offline-first session recovery; owned Firebase Auth (Apple & Google sign-in), Firestore and store releases.

Kalima — React Native, Expo, Supabase, Gemini Personal · 2026

- Arabic/English vocabulary app with spaced repetition, fingerprint sign-in, an Android home-screen widget, reminders and offline-first sync.

EDUCATION

B.Sc. Computer Science — Faculty of Science, Minia University 10/2018 – 06/2022
