IBRAHEM HASSAN

Frontend Engineer · React · Next.js · TypeScript

Alexandria, Egypt (open to Cairo / hybrid) · +20 127 679 0349 · hibrahem266@gmail.com · linkedin.com/in/ibrahem-hassan-521956247 · github.com/ibrahem-hassan2000 · Military status: Exempted

SUMMARY

Frontend engineer with 4 years of commercial experience delivering React and Next.js applications for healthcare, B2B and agency clients. I'm used to large multi-team codebases — ticketed branches, code review, staged refactors — and to building new client products from scratch. At nWeave I moved a healthcare platform with a 3.9k-commit history onto a 25-module TanStack Query layer, and built most of a client's knowledge platform with role-based access, a typed API contract and 551 automated tests. Part-time at Bites, I built finance and sales modules for a Next.js 14 business platform in a 14-person team. I write clear docs and work closely with design and backend teams.

SKILLS

Frameworks	React 19, Next.js 14 (App Router), TypeScript, JavaScript, Vite, Astro, React Native (Expo)
Data & state	TanStack Query, Zustand, REST, OpenAPI-generated types, React Hook Form, Zod
UI systems	Tailwind CSS, shadcn/ui, Radix UI, PrimeReact, MUI, Storybook, Atomic Design
Testing & quality	Vitest, React Testing Library, Jest, Playwright, oxlint, code review
Integration	ASP.NET Core APIs, Supabase, Firebase, role-based access, MFA, session handling
Process	Git, Bitbucket, GitHub, Jira, Figma, Agile/Scrum, technical documentation, AI-assisted development

EXPERIENCE

nWeave — Software Engineer (Frontend) 10/2025 – Present

Alexandria, Egypt · Healthcare and B2B SaaS products, client websites, mobile apps

AHS Medical Exchange — healthcare B2B platform · multi-team codebase (3.9k commits)

- Moved core flows (orders, invitations, messaging, staff, billing) from a custom Axios hook to TanStack Query, building a query layer of **25 domain modules** and rolling it out in stages alongside other teams' work.
- Built a formula builder and evaluation engine for healthcare billing — drag-and-drop editor, custom parser and evaluator on mathjs, live validation and a test panel — that later payment features build on.
- Wrote a React Query implementation guide for the team, worked through Jira-ticketed branches and code review, and helped two teammates through pairing.

Smart FAQ System — knowledge platform for a healthcare operations client · main frontend engineer

- Built 27 Figma screens for desktop and mobile with React 19, TypeScript, TanStack Query, Tailwind and shadcn/ui, from project setup to delivery in about three weeks (166 of 173 commits).
- Built an Atomic-Design component system with 75 Storybook stories, organised the code by feature, and kept written context docs for the team.
- Typed the full API contract (**94 endpoints**) from OpenAPI and integrated with an ASP.NET Core backend built by a separate team, with a typed error catalogue and session handling.
- Wrote **551 unit and component tests** (Vitest, Testing Library); built three roles with capability-based routing, MFA for admins, an approval workflow and an audit log.

ONE14 QARDIO — Qur'an & running app, live on Google Play & App Store

- Planned the features, UX flows and technical approach for a React Native (Expo) and Firebase app, working with a teammate who built them through an AI-assisted workflow, and tested each release on iOS and Android.

- Found why GPS distance was under-counted (a 30 km run recorded as ~25 km) and pushed the fix: 1 Hz high-accuracy tracking with a tuned software filter, tested against Strava and Apple Watch on paired iPhone and Android devices.

Client websites & other products

- OsLoop studio website: built with React Three Fiber and GSAP (3D hero, markets globe, scroll-driven sections), responsive from 320px, delivered through two client feedback rounds (26+ items).
- Shipped features, SEO data and legal pages on agency sites (Astro, React, GSAP), and product features on ElevateMate (job dashboard, validated application form) and Boost-KGoal (pattern editor, admin route guards with tests).

Bites — Frontend Developer (Part-time) 09/2025 – 04/2026

Remote · Cairo-based ERP-style business platform in Next.js 14 · 14-person team

- Built finance and sales modules: invoices, bills, expenses, double-entry journal reports, sales orders, quotes, accounts and opportunities (Next.js 14, TanStack Query, Zustand, React Hook Form, Zod, MUI).
- Added OTP-verified e-signatures and the contract-creation workflow, and co-built Theater OS, a cinema booking module with seat selection, food ordering and checkout.
- Worked through feature branches and pull requests in a 2.5k-commit codebase: **190 commits shipped to production** over 7 months part-time, the second-most of any contributor.

Profound Agency — Frontend Developer 07/2024 – 09/2025

Alexandria, Egypt · Client web applications in Next.js

- Built okoRent, a peer-to-peer rental marketplace: storefront and admin panel with live chat, notifications and user roles.
- Built a shared Tailwind and Radix UI component library reused across client applications.

Aquadic — Frontend Developer 10/2022 – 07/2024

Alexandria, Egypt · Websites for e-commerce and corporate clients

- Built responsive React and Next.js websites for multiple clients, translating Figma designs into production layouts.
- Built a shared Axios layer with interceptors for auth tokens, unified error handling and retries.

EDUCATION

B.Sc. Computer Science — Faculty of Science, Minia University 10/2018 – 06/2022
