IBRAHEM HASSAN

Senior Frontend Engineer · React · Next.js · TypeScript

Alexandria, Egypt (open to Cairo / hybrid) · +20 127 679 0349 · hibrahem266@gmail.com · linkedin.com/in/ibrahem-hassan-521956247 · github.com/ibrahem-hassan2000 · Military status: Exempted

SUMMARY

Frontend engineer with 4 years of commercial experience delivering React and Next.js applications for healthcare, B2B and agency clients. I work well in large multi-team codebases — ticketed branches, code review, staged refactors — and as the lead frontend on greenfield client products. At nWeave I designed a 25-module TanStack Query layer for a healthcare platform with a 3.9k-commit history, built a client's knowledge platform from the first commit with role-based access, a typed API contract and 551 automated tests, and led a mobile app now live on both app stores. Part-time at Bites, I built finance and sales modules for a Next.js 14 business platform in a 14-person team. I document what I build and have mentored two teammates.

SKILLS

Frameworks	React 19, Next.js 14 (App Router), TypeScript, JavaScript, Vite, Astro, React Native (Expo)
Data & state	TanStack Query, Zustand, REST, OpenAPI-generated types, React Hook Form, Zod
UI systems	Tailwind CSS, shadcn/ui, Radix UI, PrimeReact, MUI, Storybook, Atomic Design
Testing & quality	Vitest, React Testing Library, Jest, Playwright, oxlint, code review
Integration	ASP.NET Core APIs, Supabase, Firebase, role-based access, MFA, session handling
Process	Git, Bitbucket, GitHub, Jira, Figma, Agile/Scrum, technical documentation, AI-assisted development

EXPERIENCE

nWeave — Software Engineer (Frontend) 10/2025 – Present

Alexandria, Egypt · Healthcare and B2B SaaS products, client websites, mobile apps

AHS Medical Exchange — healthcare B2B platform · multi-team codebase (3.9k commits)

- Designed a TanStack Query layer of **25 domain modules** to replace a custom Axios hook, and migrated core flows (orders, invitations, messaging, staff, billing) in stages without blocking other teams' work.
- Built a formula builder and evaluation engine for healthcare billing — drag-and-drop editor, custom parser and evaluator on mathjs, live validation and a test panel — that later payment features build on.
- Wrote the team's React Query implementation guide, worked through Jira-ticketed branches and code review, and **mentored two teammates**.

Smart FAQ System — knowledge platform for a healthcare operations client · lead frontend

- Built the frontend from the first commit (React 19, TypeScript, TanStack Query, Tailwind, shadcn/ui): 27 Figma screens for desktop and mobile in about three weeks, as the main author (166 of 173 commits).
- Set up the architecture: Atomic-Design component system with 75 Storybook stories, feature folders, central route and capability config, and written context docs for the team.
- Typed the full API contract (**94 endpoints**) from OpenAPI and integrated with an ASP.NET Core backend built by a separate team, with a typed error catalogue and session handling.
- Wrote **551 unit and component tests** (Vitest, Testing Library); built three roles with capability-based routing, MFA for admins, an approval workflow and an audit log.

ONE14 QARDIO — Qur'an & running app, live on Google Play & App Store · product & technical lead

- Led product and technical direction for a React Native (Expo) and Firebase app: planned features, UX flows and technical approach, directed an AI-assisted build with a teammate, and owned on-device QA on iOS and Android.

- Drove the fix for GPS distance under-counting (a 30 km run recorded as ~25 km): 1 Hz high-accuracy tracking with a tuned software filter, field-tested against Strava and Apple Watch on paired iPhone and Android devices.

Client websites & other products

- OsLoop studio website: built with React Three Fiber and GSAP (3D hero, markets globe, scroll-driven sections), responsive from 320px, delivered through two client feedback rounds (26+ items).
- Shipped features, SEO data and legal pages on agency sites (Astro, React, GSAP), and product features on ElevateMate (job dashboard, validated application form) and Boost-KGoal (pattern editor, admin route guards with tests).

Bites — Frontend Developer (Part-time) 09/2025 – 04/2026

Remote · Cairo-based ERP-style business platform in Next.js 14 · 14-person team

- Built finance and sales modules: invoices, bills, expenses, double-entry journal reports, sales orders, quotes, accounts and opportunities (Next.js 14, TanStack Query, React Hook Form, Zod, MUI).
- Added OTP-verified e-signatures and the contract-creation workflow, and co-built Theater OS, a cinema booking module with seat selection, food ordering and checkout.
- Worked through feature branches and pull requests in a 2.5k-commit codebase: **190 commits shipped to production** over 7 months part-time, the second-most of any contributor.

Profound Agency — Frontend Developer 07/2024 – 09/2025

Alexandria, Egypt · Client web applications in Next.js

- Built okoRent, a peer-to-peer rental marketplace: storefront and admin panel with live chat, notifications and user roles.

Aquadic — Frontend Developer 10/2022 – 07/2024

Alexandria, Egypt · Websites for e-commerce and corporate clients

- Built responsive React and Next.js websites for multiple clients, translating Figma designs into production layouts.

EDUCATION

B.Sc. Computer Science — Faculty of Science, Minia University 10/2018 – 06/2022
