IBRAHEM HASSAN

Senior Frontend Engineer · React · TypeScript · React Native

Alexandria, Egypt (open to Cairo / hybrid) · +20 127 679 0349 · hibrahem266@gmail.com · linkedin.com/in/ibrahem-hassan-521956247 · github.com/ibrahem-hassan2000 · Military status: Exempted

SUMMARY

Frontend engineer with 4 years of commercial experience building React, Next.js, TypeScript and React Native products. I build frontends where correctness matters: invoices, payments and double-entry accounting reports, OTP-verified e-signatures, role-based access with MFA, typed API contracts and test suites that catch regressions before users do. Recently I led the frontend of a healthcare-operations platform from the first commit to 27 screens and 551 automated tests, and led a mobile app that is now live on Google Play and the App Store. I've mentored two teammates and I'm comfortable owning a product area end to end.

SKILLS

Core	TypeScript, JavaScript, React 19, Next.js 14, React Native (Expo), HTML, CSS
Finance domain	Invoicing, payments, double-entry accounting reports, receivables/payables, contracts with OTP e-signatures
Data & state	TanStack Query, Zustand, React Hook Form, Zod, OpenAPI-generated types, REST, Supabase, Firebase
Testing & quality	Vitest, React Testing Library, Jest, Playwright, Storybook (a11y), oxlint, code review
Security & access	Role- and capability-based routing, MFA flows, session expiry handling, route guards, biometric sign-in
UI	Tailwind CSS, shadcn/ui, Radix UI, PrimeReact, Atomic Design, Arabic/English (RTL) with i18next
Process	Git, Bitbucket, Jira, Figma, Agile/Scrum, AI-assisted development

EXPERIENCE

nWeave — Software Engineer (Frontend) 10/2025 – Present

Alexandria, Egypt · Healthcare and B2B SaaS products, mobile apps

Smart FAQ System — knowledge platform for a healthcare operations client · lead frontend

- Built the frontend from the first commit (React 19, TypeScript, TanStack Query, Tailwind, shadcn/ui): 27 Figma screens for desktop and mobile, shipped in about three weeks as the main author (166 of 173 commits).
- Implemented three user roles with capability-based routing and navigation, invitation activation, session-expiry handling and **MFA for administrators**.
- Typed the full API contract (**94 endpoints**) from OpenAPI and built the data layer with a typed error catalogue against an ASP.NET Core backend, then removed every mock once the API was live.
- Wrote **551 unit and component tests** (Vitest, Testing Library) covering the request layer, query client, sign-in journeys and the review workflow, plus 75 Storybook stories with accessibility checks.
- Built an approval workflow (draft → submit → return or publish), version comparison and a filterable audit log, so every published answer is reviewed and traceable.
- Fixed list performance by rendering one table layout and stopping per-row menu and badge re-renders.

AHS Medical Exchange — healthcare B2B platform · large multi-team codebase

- Built a **formula builder and evaluation engine for billing**: drag-and-drop editor, custom parser and evaluator on mathjs, live validation and a test panel to try formulas before saving. It shipped, and later payment features build on it.

- Designed a TanStack Query layer of **25 domain modules** to replace a custom Axios hook and migrated core flows (orders, invitations, messaging, staff, billing) in stages, removing duplicated request and loading logic.
- Wrote the team's React Query implementation guide and **mentored two teammates** through code reviews and pairing.

ONE14 QARDIO — Qur'an & running app, live on Google Play & App Store · product & technical lead

- Led product and technical direction for a React Native (Expo) and Firebase app: planned features, UX flows and technical approach, and directed an AI-assisted build with a teammate.
- Drove the fix for GPS distance under-counting (a 30 km run recorded as ~25 km). I found that coarse location filters were dropping real movement, and the fix moved tracking to 1 Hz high-accuracy fixes with a tuned software filter, field-tested against Strava and Apple Watch on paired iPhone and Android devices.
- Owned on-device QA across iOS and Android (UI, performance, usability) through TestFlight and internal Android builds.

Other products

- Boost-KGoal (health workouts dashboard): built the pulse-pattern editor and secured the admin area with route guards and tests.

Bites — Frontend Developer (Part-time) 09/2025 – 04/2026

Remote · Cairo-based business platform (finance, sales CRM, contracts) in Next.js 14

- Built finance modules: invoices (builder, payments, attachments, email tracking), bills, expenses, debit notes, and receivables/payables and **double-entry journal reports**.
- Added **OTP-verified e-signatures** to contracts and invoices and built the contract-creation workflow.
- Built sales screens (orders, quotes, accounts, opportunities) with TanStack Query, React Hook Form, Zod and MUI, and co-built a cinema booking module with seat selection, food ordering and checkout.
- Shipped **190 commits to production** over 7 months part-time, the second-most in a 14-person team.

Profound Agency — Frontend Developer 07/2024 – 09/2025

Alexandria, Egypt · Client web applications in Next.js

- Built okoRent, a peer-to-peer rental marketplace: storefront and admin panel with live chat, notifications and user roles.

Aquadic — Frontend Developer 10/2022 – 07/2024

Alexandria, Egypt · Client websites

- Built responsive React and Next.js websites for e-commerce and corporate clients from Figma designs.

PROJECTS

Kalima — React Native, Expo, Supabase, Gemini Personal · 2026

- Arabic/English vocabulary app with spaced repetition, fingerprint sign-in, an Android home-screen widget, reminders and offline-first sync.

EDUCATION

B.Sc. Computer Science — Faculty of Science, Minia University 10/2018 – 06/2022
